

Data Management for the Budding Researcher

Plant your data firmly on the ground, and let your study flourish

Preparing a proposal for funding?

Having a data management plan in place can help.

Grant-giving institutions and other agencies are placing more emphasis on research data. A data management plan secures your research by breaking down the data lifecycle, showing strengths, weaknesses, opportunities and threats to the information you handle.

This service offers:

- ❖ Face-to-face or Skype consultation on the project
- ❖ Step-by-step process of your research in the data lifecycle
- ❖ Identification of data compliance issues, in particular privacy and security
- ❖ A Professional Data Management Plan to support your grant proposal
- ❖ Support and advice on implementation, including tools, resources and best practices

By bringing on information and data specialist, you enhance your research, and demonstrate commitment to data quality and industry compliance.
